MARKANT WORKWAYS

Workways once again demonstrate Markant's innovation in the world of offices.

The new social seating programme features a complete collection of modular elements that offer endless flexibility in functionality and configuration. Increasing implementation of the New World of Work and the emergence of generation Y into the workplace are creating major changes in the offices landscape. Fixed work places at traditional desks in kiosk-based offices are having to make way for Open Office set-ups with a variety of furniture for work and discussion purposes. Modern offices are characterised by a shift towards activity-related work places instead of job-related work places. By supporting all possible activities and functionalities in 1 representative range of furniture, Markant has made it possible to combine uniformity and versatility: the Workways programme has been specifically developed to comply with all needs in modern office environments.

In principle, Workways is a chair that, via pleasant use of endlessly adjustable elements and the addition of accompanying intelligent components, is able to furnish entire office settings in its own right. Workways is a comprehensive social seating programme with functionality ranging from a simple waiting seat to a complete video conferencing room for 10 or more people.

The principle behind Workways is simple: seats are upright or 90° and are all available in 3 height variations. Thanks to the intelligent design, the elements can be endlessly configured in any combination. 'Smart units' like Smart Box and Go Between can also be easily connected to the seating elements. This makes it possible to create comprehensive office landscapes where users are able to work, conduct informal discussions and hold meetings. Thanks electricity and data interfaces, as well as compatibility for video conferencing, Workways is a total solution for the offices of today.

Concentration; communication; working alone, with a colleague or in a team; Workways allows you to create your own work environment.

THE OFFICE LANDSCAPE

MEETING

The Workways Meeting Table is a table that can be integrated into the seating element or be used as stand-alone element. The upholstered edges give the table a unique appearance and the Extension set helps to create a Video Conference location.

LIGHTING

The various lighting types used in Workways complement the overall programme. The Light Shade with adjustable height provides extra atmosphere in professional office environments and is a landmark in Open Offices. The revolving and directional Reading Light is an effectively designed light source that serves as work lighting and offers users perfect assistance in all circumstances.

PLUG & PLAY

Electricity and data connections can be integrated into the various elements to help users with their activities in every configuration of the Workways landscape. Concealed neatly out of sight; with extra storage space for cables and other unsightly electricity features. Laptop, telephone charger and network connection: work can be carried out everywhere!

CORNER

The principle behind Workways is simple: seats are upright or 90° and are all available in 3 height variations. Thanks to the intelligent design, these elements can be endlessly configured in any combination. A dynamic office setting is created because the height of elements can be adjusted. In order to ensure the highest level of comfort, all seating elements feature various layers of foam and separate back cushions.

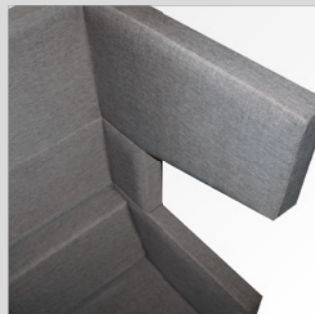

GREEN BOX

It has been scientifically proven that plants have a positive impact on work climate. Plants not only help to create a homely and relaxed atmosphere, but are also essential for a healthy indoor climate. A Green box allows you to bring plants into the work place.

STORAGE

Because office workers have permanent need for storage, Workways offers complete storage for day-to-day activities. Shelf space for storing files with personal notes, briefly concealing a tablet or temporarily storing a mobile phone during a meeting. Naturally, it can also be storage space for magazines in waiting rooms and an easy-to-clean place for putting an early morning coffee while staring-up one's laptop.

ELECTRICITY

To offer modern office workers the best possible support, the Workways collection features intelligent elements equipped with electricity, data connections and lighting. The Smart Box and the Go Between feature power sockets with 2x 230V and 2x RJ45 connections, which can be discretely incorporated into an area easily accessible from a seated position, while simultaneously offering solutions for excessive cable lengths. These elements feature wooden accents to create a welcoming appearance. Cable management is supplied as a standard feature.

LIGHTING

Lighting plays an important role in the offices landscape. It helps to create atmosphere, but is also essential for safeguarding productivity by supplying the light needed to perform the work in question.

The high Go Between elements feature a Reading Light: revolving and directional lighting that users can adjust according to preferences and requirements. The Light Shade is an element that provides atmospheric lighting for the Smart Box or Workways table elements. The attractive light shade and the adjustable stand ensure that light can be perfectly modified to suit the surroundings. Naturally, all lights feature energy-efficient light sources.

MEDIA INTEGRATION

In order to comply with the latest needs and preferences, it is essential to integrate media into the offices landscape. Various Workways elements make it possible to place monitors and connect laptops.

By intelligently using the flexibility offered by Workways, it is possible to create complete video conferencing rooms, including meetings tables, for any number of participants. The Workways elements feature enough cable channels for combinations of VGA, HDMI and USB cables and can be fitted with extra connection points.

FRAME

The Workways elements feature 4 high quality, chrome legs as standard. On individual elements, the legs have been placed in the corners for optimal stability and aesthetics. For connected elements, it is possible to place the legs further inwards to create an illusion of greater space and to give the impression that elements are floating.

The height of the legs has been selected to make it easy to connect and disconnect the elements, and to make the table accessible for cleaning purposes.

ACOUSTICS

Noise can be a major environmental factor in open office landscapes. Excessive surround noise could be a problem or some conversations may only be intended for the concerned parties. In both cases, the issue relates to acoustics in the immediate surroundings. By implementing different dimensions and materials, Workways can be used to create natural acoustic barriers in office landscapes. The Ear Chair and the Silent Chair offer users extra acoustic protection, whereby permitting maximum concentration. The Phone Booth make it possible to have telephone conversations within dynamic environments, in a peaceful and private manner.

GREEN BOX

All the low Workways elements have specific functions. The Square is a versatile seating element, the Smart Box makes it possible to add intelligence to the most basic seat types and the Coffee Box introduces storage and shelf space into the workplace. The Green Box is another essential part of the offices landscape. Productivity is demonstrably increased by introducing living green elements into office environments. It not only helps to create atmosphere, but plants also improve the office climate by taking in and breaking down toxic substances.
